

HIGH POWER IR SPEED DOME CAMERA

User Manual

Please read this manual thoroughly before use or installation and keep it handy for future reference

WARNINGS AND CAUTIONS

WARNING

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS PRODUCT TO RAIN OR MOISTURE. DO NOT INSERT ANY METALLIC OBJECTS THROUGH VENTILATION GRILLS OR OPENINGS ON THE EQUIPMENT.

CAUTION

EXPLANATION OF GRAPHICAL SYMBOLS

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user the presence of non-insulated “dangerous voltage” within the product’s enclosure that maybe of sufficient magnitude to constitute a risk of electric shock to different persons.

The exclamation point within an equilateral triangle, is intended to alert the user the presence of important operating and maintenance (servicing) instructions in the literature accompanying this product.

PRECAUTIONS:

1. Persons without technical qualifications should not attempt to operate this dome device before reading this manual thoroughly.
2. Remove any power to the dome before attempting any operations or adjustments inside the dome cover to avoid potential damage to the mechanism.
3. Inside the dome cover there are precision optical and electrical devices. Heavy pressure, shock and other sudden adjustments or operations should be avoided. Otherwise, you may cause irreparable damage to the product.
4. Please DO NOT remove or disassemble any internal parts of the video camera to avoid normal operation and possibly void the warranty. There are no serviceable parts inside the camera.
5. All electrical connections to the dome should be made in strict accordance with the attached labels and wiring instructions in this manual. Failure to do so may damage the dome beyond repair and void the warranty.
6. For outdoor installation especially in high places or poles, it is highly recommended that the proper lightning arrestors and surge suppressors are installed before the dome is entered into service.
7. Please do not use the product under circumstances where the limits exceed the maximum specified temperature, humidity or power supply specifications.

IMPORTANT SAFEGUARDS

1. Read these instructions before attempting installation or operation of dome device.
2. Keep these instructions for future reference.
3. Heed all warnings and adhere to electrical specifications. Follow all instructions.
4. Clean only with non abrasive dry cotton cloth, lint free and approved acrylic cleaners.
5. Should the lens of the camera become dirty, use special lens cleaning cloth and solution to properly clean it.
6. Do not block any ventilation openings. Install in accordance with manufacturer's instructions.
7. Use only attachments or accessories specified by the manufacturer.
8. Verify that the surface you are planning to use for attaching the dome can adequately support the weight of the device and mounting hardware.
9. Protect this device against lightning storms with proper power supplies.
10. Refer all servicing to qualified service personnel. Servicing is required when the device has been damaged in any way, when liquid traces are present, or the presence of loose objects is evident or if the device does not function properly, or has received sever impact or has been dropped accidentally.
11. Indoor dome is for indoor use only and not suitable for outdoor or high humidity locations. Do not use this product under circumstances exceeding specified temperature and humidity ratings.
12. Avoid pointing the camera directly to the sun or other extremely bright objects for prolonged period of time avoiding the risk of permanent damages to the imaging sensor.
13. The attached instructions are for use by qualified personnel only. To reduce the risks of electric shock, do not perform any servicing other than contained in the operating instructions unless you are qualified to do so.
14. During usage, user should abide by all electrical safety standards and adhere to electrical specifications for the operation of the dome. The control cable for RS485 communications as well as the video signal cables should be isolated from high voltage equipment and high voltage cables.
15. Use supplied power supply transformer only.

1 Product Introduction

1.1 Package Contents

IR speed dome	1pc
Wall mount bracket	1pc
Power supply	1pc
Screws kits	1pc
User manual	1pc

1.2 Specification

Horizontal Rotation Speed	0.02°-200°/s
Tilt Rotation Speed	0.02°-90°/s
Horizontal Rotation Range	360°
Tilt Rotation Range	93°
Auto Flip	Horizontal 180°, Vertical 90°
Ratio Speed	Support
Auto Control IR LED	PWM
IR Testing Time	2-15s selectable
Ambient Light Testing	0-50 grades
IR Illumination On	0-25 grades selectable
IR Output Power	1-9 grades selectable
IR Standby Power	1-9 grades selectable
A-B Scan	User programmable
A-B Scan Speed	1-9 speed setting available
360° Scan Speed	1-9 speed setting available
Dwell Preset	5-60s interval
Preset Points	220
Go to Preset Speed	200°/s
Guard Tours	4 groups
Guard Points	Max.16 points, dwell time user selectable
Pattern Scan	4 pcs
Pattern Scan Record	max.15 minutes, max.512 commands
Park Time	1-60mins available
PWR on Action	Memory/Pattern 1/Tour 1/360° scan/A-B scan/Preset 1-8/None
Park Action	Pattern 1/Tour 1/360° scan/A-B scan/Preset 1-8/None
Communication Protocol	Pelco-D, Pelco-P
Communication	RS485 Bus
Baud Rate	2400/ 4800/ 9600bps
Soft ID	1-255
Privacy Mask	Support (according to zoom module type)
OSD Menu	Multiple Language
Time Scheduling Function	8 tasks
Alarm	4 inputs and 2 outputs (Optional)
Timing Run	Built-in high precision RTC clock, support time management
Operating Temperature	-30°~ +50°
Operating Humidity	≤95% Non Condensing
Heater & Blower	Auto temperature control
Power	AC/DC15-28V ≤3A
Lightning Protection	Transient voltage 6000V
IR Illumination Distance	140M
Power Consumption	≤ 20W
LED Type	Ø20=8, Ø16=5
Camera zoom module specification at last page of user manual	

1.3 Performance Features

- ✧ PWM function. Intelligent IR illumination & power consumption is variable, dependant the zoom factor.
- ✧ 3D allocation. That screen coordinate location and zoom local are performed at the same time can be available.
- ✧ Privacy masking. 24 privacy masking areas can be random set (module support).
- ✧ Supported Protocols. Pelco-D/P; Others on special request.
- ✧ 4 path patterns. Each path can record 512 different instructions or 900s path operation.
- ✧ Manual control speed. The lowest 0.02°/s smoothly running can be available.
- ✧ 4 guard groups. The dwell position and time of 16 preset points of each group can be edited independently.
- ✧ Optional IP module (built in provision).
- ✧ Built-in high density RTC clock supports time management function.
- ✧ Optional alarm, 4 alarm inputs and 2 alarm outputs.
- ✧ Park action. If users don't operate the dome in set time, it will automatically run preset guard group, trace memory group, pan scan etc.
- ✧ Memory of operation before power off.
- ✧ Built-in fan and heater can control the temperature automatically.
Heater works below 0℃ and fan works above 40℃.
- ✧ Multiple languages for OSD menu, English, Spanish, Chinese etc.
- ✧ Illumination to ambient light can be adjustable.
- ✧ Accurate step motor control makes it stable running, precise location and sensitive reaction.
- ✧ Total metal body construction, waterproof IP 66.
- ✧ Built-in 6000V anti-lighting and anti-surge protection equipment.

1.4 Function Description

Alarm Linkage

Intelligent dome camera supports 4 switch alarm inputs, 1 switch output and 1 digital output. When the dome camera has detected the alarm closed signal, it will run the preset action which can be one of the calling preset points or no action.

Auto-adaptive to Protocol and Module

The dome can auto-adaptive to the multi protocol and most of the module without changing the DIP switch.

3D Allocation

With this function users can move the image of some area to the center of screen according to specified level and vertical coordinates and auto control to zoom according to zoom parameter set. Screen coordinate location and zoom local can be available via the software support.

Privacy Masking

In the monitoring scope, areas that users can't or aren't willing to make show in the screen of the monitor can be set as privacy protected area (area masking), such as area where customers enter the password in monitoring system of bank or some doorway.

Trace Memory (Pattern Scan)

The traces of camera's any running action in every directions of PTZ can be saved, which is called pattern scan. In pattern scan the camera turning to up, down, left and right and zooming in or out can be saved. This function remembers and imitates a process of operator's operation.

This dome camera has 4 path patterns. Each path can record 512 different instructions or the longest 15mins' path operation. Opening any one of the paths can remember automatically the present running trace and scan cyclically according to the recorded trace.

Zero Alignment

There is a point specified as zero point. When the dome is working, the preset point is not accurate caused by the operator. User can make the dome automatically enable the zero alignment by operational order.

Auto Flip

In the manual scanning mode, when beyond the maximum angle in tilt and if the joystick is held continuing in tilt direction, the dome will automatically rotate 180 degree in horizontal direction to maintain continuity of scanning. So vertical 180° continuous monitoring comes true.

Focus

The auto focus enables the camera to focus automatically to maintain clear image. User can use manual focus to get expected image in special condition.

Under the following conditions camera will not auto focus on the camera target:

- (1) Target is not in the center of the screen;
- (2) Attempting to view images that are far and near at the same time;
- (3) Target is strongly lighted object, such as neon lamp, etc.;

- (4) Targets are behind the glass covered with water droplets or dust;
- (5) Targets are moving quickly;
- (6) Monotonous large area targets, such as wall;
- (7) Targets are too dark or faint.

BLC(Back Light Compensation)

If the light of background is bright, the target in the picture may appear dark or as a shadow. BLC enhances exposure of the target in the center of the picture. The dome adjusts the iris according to the center of the pictures. If there is a bright light source outside this area, it will wash out to white. The camera will adjust the iris so that the target in the sensitive area will be properly exposed.

Iris Control

Factory default is automatic camera aperture, in mode of which camera senses changes in ambient light through moving and adjust automatically lens aperture to make the brightness of output image stable.

Ratio Speed

Intelligent pan and tilt speed is variable depend on the zoom factor. When zooming in, the speed will become slower and when zooming out, the speed will become faster.

360 Scan

Dome 360°clockwise continuously scans the display scene at set speed in horizontal direction under the condition that pitch angle remains the same. In the scanning status, operator can move the joystick to exit from scanning.

Preset

After the dome camera keeps arbitrary PTZ location, it will automatically move to the defined position when preset is called.

Guard Tour Scan

Dome patrol scans according to certain edited preset order.

Limited Points Scan (A-B Scan)

The dome operates reciprocating scanning the real scenarios at a certain speed between the set left and right points. The range of left and right points boundary is 20° - 340°.

Power Off Memory

This feature allows the dome to resume its previous preset or status after power is restored. By default setting, the dome support power up memory, which improves the reliability and avoids repeated settings of the parameter.

Park Action

If users don't operate the dome in set time, it will automatically run preset specific mode (360 scan, A-B scan, Tour, Preset 1-8, None etc.).

Multilanguage OSD Menu

The available language on screen menu can be English, etc. User can set the function or

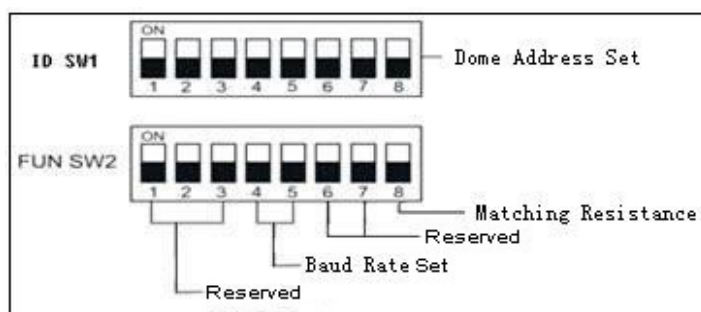

parameter, or check the related information through the OSD.

2 Installation

2.1 DIP Switch Settings

2.1.1 Preparation

Before installation, make sure that the protocol, baud rate and address code used by the product is fully consistent with the control system. Corresponding DIP switch site can be seen below:

2.1.2 Address Settings

DIP switch SW1 is the address settings of camera. It is a 8-bit switch. Each switch corresponds with 0 or 1 in the Binary code. OFF status means 0 while ON status means 1.

(See illustration above) Turn on the 1st and 3rd (allocated to ON position) and get the binary code 0000101, so the correspondence address is 5.

Detailed settings please refer to Appendix □ “Address Code Mapping Table”.

2.1.3 Baud Rate Settings

The 4th and 5th DIP Switches set the Baud rate. Factory-default setting is 2400bps.

Baud rate: 1200bps, 2400bps, 4800bps, 9600bps selectable

2.1.4 RS-485 Bus Matching Resistance

The 8th bit of DIP switch SW2 is to select the matching resistor. To the control center, in order to prevent the reflection and interference of RS-485 communication signal and other signals, the parallel matching resistor is needed in the communication interface of dome camera at the end away from the control center.

DIP switch SW2 has a control switch of matching resistor. That the 8th bit micro-switch turn to the ON state (set as below) means having connected the matching electricity to RS-485 bus.

2.2 Bracket Dimensions

2.2.1 Wall Mounted Bracket

2.2.2 Corner Mounted Bracket

2.2.3 Pole Mounted Bracket

2.2.4 Ceiling Mounted

2.3 Installation of Brackets.

2.3.1 Wall Mounted

Fig 1

Installation conditions:

Wall mounted dome can be used in the hard wall structure whose thickness should be enough to install expansion bolt in indoor and outdoor environment. The wall can bear at least 4 times the weight of the dome. Install wall hanging bracket:

a. As shown in fig 2, with the installation holes in the underside of the wall hanging bracket as pattern, draw punched locations and punch.

Fig 2

b. As shown in fig 3, fix the wall hanging bracket on the wall with wire and cable through it.

Fig 3

2.3.2 Corner Mounted

Fig 4

Installation conditions:

Corner mounted dome can be used in the hard wall structure with an angle of 90° whose thickness should be enough to install expansion bolt in indoor and outdoor environment. The wall can bear at least 4 times the weight of the dome. Install corner mounted attachment and wall hanging bracket:

a. As shown in fig 5, with the installation holes in the corner mounted attachment as pattern, draw punched locations on the wall with an angle of 90° and punch to install expansion bolt.

Fig 5

b. As shown in fig 6, use M8 screw nut to fix the base of corner mounted on the wall with all cables through the center holes of the corner mounted, marine glue and bracket. Enough wiring length should be left.

Fig 6

c. As shown in fig 7, fix the wall hanging bracket with all cables power through it on the corner mounted attachment.

Fig 7

2.3.3 Pole Mounted

Fig 8

Installation conditions:

Pole mounted dome can be used in the hard pole structure in indoor and outdoor environment whose diameter should match the installation size of stainless hose clamps. Factory default is 6 inches stainless hose clamps (fit $\phi 130-152\text{mm}$ pillar). The pole structure can bear at least 4 times the weight of the dome. Install corner mounted attachment and wall hanging bracket:

- a. As shown in fig 9, use the stainless hose clamps to fix the pole mounted attachment with all cable through it on the pole structure.

Fig 9

b. As shown in fig 10, fix the wall hanging bracket with all cables through it on the pole mounted attachment.

Fig 10

2.3.4 Ceiling Mounted

Fig 11

Installation conditions:

Ceiling mounted dome with thick pole can be used in the hard ceiling structure whose thickness should be enough to install expansion bolt in indoor and outdoor environment. The ceiling can bear at least 4 times the weight of the dome. Install the base of ceiling and boom:

a. As shown in fig 12, with the installation holes in the base of ceiling as pattern, draw punched locations in the ceiling and punch to install M6 expansion bolt.

Fig 12

b. As shown in fig 13, at first unscrew the M4 screw at the side of the base of ceiling and split the base of ceiling and boom. Then make the three groups of cables of power, video/control and alarming into the side recessing seal groove of the ceiling connector bottom and through the core hole of the base of ceiling mounted. Fix the base of hang ceiling on the ceiling board.

Fig 13

Note: If the dome is used in the outdoor conditions, use the silica gel on the faying surface of the base of hang ceiling and the ceiling board and around the out-holes to be sure water proof

c. As shown in the fig 14, tighten the boom with electrical wire and cable through it on the base of ceiling and screw up the M4 screw.

Fig 14

Note: If the dome is used in the outdoor conditions, after using enough raw materials to wrap the thread at the upper end of boom, tighten the boom on the base of ceiling. Use the silica gel around the joint sleeve and connector of the boom to be sure water proof.

2.4 Connection

Connection of RS485

Before connecting, please turn off the power and read the instructions of all connected devices carefully.

Fig 15

POWER ON	

Power on self testing completes.

3.2 Basic Function

Dome Running

Control joystick or up, down, left and right key in the keyboard.

Zoom

Press ZOOM- button to make the lens farther and minify the scene.

Press ZOOM+ button to make the lens closer and magnify the scene.

Focus

After FOCUS- button is pressed, the object in vicinity will become clearer while the object far away will become ambiguous.

After FOCUS+ button is pressed, the object far away will become clearer while the object in vicinity will be ambiguous.

Iris

Press IRIS- to gradually shrink the iris and decrease the image brightness.

Press IRIS+ to enlarge the iris and increase the image brightness.

Preset Point

Setting preset, press button “preset”+ “number”+ “enter”.

Calling preset, press button “call”+ “number”+ “enter”.

Deleting preset, press button “clear”+ “number”+ “enter”.

Remark: Some preset points are used tentatively for special functions.

3.3 Special Function

The follow presets are predefined as special function, press “shot”+ “preset No.”+ “enter” to enable those functions:

PREST	FUNCTION	PRESET	FUNCTION
33	Pan scan180 °	86	BLC on
34	Reset	87	BLC off
75	Trace memory 1	88	Freeze on
76	Trace memory 2	89	Freeze off
77	Trace memory 3	91	Limited Points Scan (A-B scan)
78	Trace memory 4	92	Set left point of A-B scan
79	Digital zoom on	93	Set right point of A-B scan
80	Digital zoom off	94	OSD menu off
81	Auto day/night	95	OSD menu on
82	Switch to night	96	Guard tour 3
83	Switch to day	97	Guard tour 2
84	Force on far light	98	Guard tour 1
85	Force on near light	99	360 scan

Note: If use some other equipments to control IR dome, some special functions probably can't be effective because of the limit of protocol.

3.4 Screen Character Operation

Call preset 95 to enter the OSD, and call preset 94 to exit the OSD.

- ✧ Up or Down: Move the option of the OSD, change the value on the OSD.
- ✧ Right: Enter the option, select the item or confirm.
- ✧ Left: Return to main menu or cancel
- ✧ Zoom Display: x XXX, XXX is the present zoom of camera.
- ✧ Time Display: XXXX(year)-XX(month)-XX(day) XX(hour)-XX(minute)-XX(second)
- ✧ Angle Display: XXX.XX(pan)/XXX.XX(tilt)
- ✧ IR Display: ☀ means the IR display status is on. ☐ means the IR is on.

Remark: “-” means the cursor selecting some option. “ ⌘ ” means editing the content of some option.

EXIT	

- ✧ PARK MODE: There are 13 actions of None, Pattern 1, Tour 1, 360° scan, A-B scan, Preset 1-8 selectable.
- ✧ PARK TIME: The dome camera runs home position after a period of idle time which is home time and whose range is 1-60 minutes.
- ✧ POWER ON ACT: There are 14 actions of Memory, Pattern 1, Tour 1, 360° scan, A-B scan, Preset 1-8, None selectable.
- ✧ RATIO SPEED: Ratio speed can be set as ON or OFF status.
- ✧ AUTO FLIP: The dome camera operated flips horizontally 180° when beyond the maximum angle. If continuing withholding the joystick when beyond the maximum angle in tilt, it flips horizontally 180° and 0° in tilt. So vertical 180° whole continuous monitoring comes true.

4.2.7 Alarm

<DOME>	
<PRESET>	
<SCAN>	
<GUARD TOUR>	
<PATTERN>	
<PRIVACY ZONE>	
<OTHER>	
-<ALARM >	
EXIT	

<ALARM>	
-ALARM IN	OFF
ALARM OUT	NC
DWELL TIME	05S
ALARM 1	PRESET-01
ALARM 2	PRESET-02
ALARM 3	PRESET-03
ALARM 4	PRESET-04
EXIT	

- ✧ ALARM IN: Alarm input has OFF and ON selectable.
- ✧ ALARM OUT: Alarm output has NC and NO selectable.
- ✧ DWELL TIME: Its range is 05-10S.
- ✧ ALARM 1: No action and preset 1-16 are selectable.
- ✧ ALARM 2: No action and preset 1-16 are selectable.
- ✧ ALARM 3: No action and preset 1-16 are selectable.
- ✧ ALARM 4: No action and preset 1-16 are selectable.

Note: If there are several alarm inputs at the same time, the system will respond to the alarm inputs in turn according to the dwell time.

4.3 Camera

<CAMERA>	
ZOOM LIMIT	
FOCUS MODE	AUTO
DIGITAL ZOOM	OFF
ZOOM SPEED	HIGH
-<ADV>	
<AE>	
EXIT	

- ✧ ZOOM LIMIT: Display the maximum zoom position, which relates to that digital zoom is OFF or ON.
- ✧ FOCUS MODE: Auto and manual are selectable.
- ✧ DIGITAL ZOOM: ON and OFF are selectable.
- ✧ ZOOM SPEED: HIGH and LOW are selectable.

4.3.1 CAM ADV

<CAM ADV>	
-WB MODE	AUTO
RED GAIN	AUTO
BLUE GAIN	AUTO
SHARPNESS	05
BLC	OFF
WDR	OFF
EXIT	

- ✧ WB MODE: There are indoor, outdoor, auto, manual selectable.
- ✧ RED GAIN: It can only be adjusted under the condition that the WB mode is manual. And its range is 000-255.
- ✧ BLUE GAIN: It can only be adjusted under the condition that the WB mode is manual. And its range is 000-255.
- ✧ SHARPNESS: Its adjustable range is 0-15 grades.

- ✧ BLC: It has ON and OFF selectable.
- ✧ WDR: It has ON and OFF selectable.

4.3.2 CAM AE

<CAM AE>	
-AE MODE	AUTO
IRIS MODE	AUTO
IRIS TIME	AUTO
SHUTTER	AUTO
GAIN	AUTO
ICR	DAY
EXIT	

- ✧ AE MODE: It has auto and manual selectable.
- ✧ IRIS MODE: It has auto and manual selectable.
- ✧ IRIS TIME: Set the speed of iris varying.
- ✧ SHUTTER: Set the camera shutter. There are auto and manual shutter selectable.
- ✧ GAIN: Setting GAIN has auto and manual selectable.

- ✧ ICR: It has auto, day and night selectable.

Remark:

1. Iris, shutter and gain can only be set under the condition that AE mode is manual.
2. D/N switch function can only switch automatically normally under the condition that AE mode is auto.
3. All the above functions are available if the camera supports.

4.4 IR

<IR>	
IR MODE	AUTO
OUTPUT POWER	9
TESTING TIME	08S
STANDBY POWER	9
STANDBY TIME	20S
ILLUMINATION ON	05L
IR SWITCH ZOOM	08
AMBIENT LIGHT	
EXIT	

- ✧ IR MODE: It has auto, small light on, large light on, manual and off selectable.
- ✧ OUTPUT POWER: Its selectable range is 1-9 level.
- ✧ TESTING TIME: Its settable range is 2-15S.
- ✧ STANDBY POWER: IR standby power can be set to 1-9 level when the dome camera is in idle time, which can improve the life of IR lamps.
- ✧ STANDBY TIME: The time interval from no any operation to effective operation of dome camera.
- ✧ ILLUMINATION ON: Its range is 0-25 level. In the IR mode of auto, when the "ILLUMINATION ON" is lower than "AMBIENT LIGHT", the picture turns to color and IR lamps close. When "ILLUMINATION ON" is higher than "AMBIENT LIGHT", likewise, the picture turns to night and IR lamps open.
- ✧ IR SWITCH ZOOM: When zoom value reaches to the demanded setting, the IR LEDs will automatically switch from near illumination to far illumination. Zoom value options depend on the module, 01- 20. Default setting is 15. Eg, when the zoom value is set to 06, the IR LEDs will automatically switch from near illumination to far illumination after the zoom value reaches to 6X or more than 6X.
- ✧ AMBIENT LIGHT: This is system data and can't be changed. It updates automatically in the range of 50 levels according to the ambient light.

4.5 Display

<DISPLAY>	
DOME ID	ON
ZOOM	ON
P AND T	ON
ACT	ON
TIME	OFF
IR	ON
EXIT	

- ✧ DOME ID: It displays ON or OFF.
- ✧ ZOOM: It can be selected as ON or OFF.
- ✧ P AND T: It can be selected as ON or OFF.
- ✧ ACT: It displays the current action, such as set preset, call preset, 360°scan. ON or OFF can be selected.
- ✧ TIME: It has ON and OFF modes.
- ✧ IR: "☀" means IR display is on and can be seen at the top left corner of screen.
"□" means IR is on, which will be filled gradually along with the illumination level.

Remark: Display Set mainly prompts the user to note the operation that the dome camera is running.

4.6 Time

<TIME>	
DATE	2000-01-01
TIME	00:00:00
-<SCHEDULE>	
SAVE	
EXIT	

✧ DATE: Set the system date.

✧ TIME: Set the system time.

✧ SCHEDULE:

Action: There are None, Pattern 1, Tour 1, 360 Scan, A-B Scan, Preset 1-8 selectable.

Example of Schedule:

<SCHEDULE>		
START	END	ACT
00:00:00	00:00:00	NONE
00:00:00	00:00:00	NONE
00:00:00	00:00:00	NONE
00:00:00	00:00:00	NONE
00:00:00	00:00:00	NONE
00:00:00	00:00:00	NONE
00:00:00	00:00:00	NONE
00:00:00	00:00:00	NONE
-SAVE		

1: 8 schedules can be set. First, select the schedule needing to be set and press the right key to enter the setting status.

2: Use the up and down keys to adjust the present value, and press the right key to enter and come to the next adjustment. The item being changed will blink. When it blinks, operate the right key again to exit the editing the schedule. Press the left key to give up operation.

3: Select the next schedule and repeat the operations above.

4: When setting the status, press left key to exit setting. When selecting the status, press left key to return to the previous page.

Remark: When the schedule is set, there can not be overlapped part in periods of time. The system will respond at priority to the first triggered schedule, only after which is completed, it will respond other schedules. Please make sure there is only one schedule at some certain period. System will return to preset 1 after completing schedule.

4.7 Language

<LANGUAGE>	
-LANGUAGE	ENGLISH
EXIT	

✧ LANGUAGE: Language can be set as English and Chinese. Default is English.

4.8 Reset

<RESET>	
-CAM DATA	
SYS DATA	
FACTORY DEFAULT	
EXIT	

✧ CAM DATA: It is used to initialize the camera and apply to the situation of camera displaying incorrectly.

✧ SYS DATA: It is used to initialize the system settings, including the camera settings, but it will not delete all the information in memory.

✧ FACTORY DEFAULT: It is used to initialize the settings of system and camera. After it performs, all the

information in memory will be deleted, such as presets, pattern, etc. Please use carefully. And this operation will take much time. Please wait patiently.

Appendix □ Anti-lightning, Anti-surge

This product is extremely air discharge and lightning protection with TVS tube technology, which can effectively prevent the transient lightning below voltage 6000V, surge and damages caused by other types of pulse signals.

However, necessary protective measures should be made in the premise of ensuring electrical safety for outdoor installation according to the actual situation:

- Signal transmission line must be at least 50 meters far away from the high-voltage equipment or high voltage cable.
- Try to choose outdoor wiring laid down along the roof line.
- Way of sealed steel pipe buried wiring is used in the area which opened, and steel pipe units grounded in one point. Overhead wiring is absolutely prohibited.
- In the strong thunderstorms area or areas with high induced voltage (such as high voltage substations), measure of installation of additional high power lightning protection equipment and lightning rod must be taken.
- Lightning protection and grounding of outdoor devices and lines must take the lightning-protection requirements of buildings into consideration, and comply with the related national standards and industry standards.
- System must be equipotential grounding. Grounding device must meet dual requirements of anti-interference and electrical safety, and should not be shorted or mixed with the adjacent lines in the strong power grid. When system is independently grounded, grounding impedance should be less than 4Ω , and cross-sectional area of grounding conductor must be not less than 25mm^2 .

Fig 25

Appendix □ Clean Transparent Cover

In order to assure a clear image of dome, the under cover of dome should be cleaned regularly.

- Be careful when cleaning and hold the outer ring of under cover by hands to avoid directly touching with it. Because the acid sweat of finger membrane may corrode the surface coating

of under cover. Hard tool scratching the under cover may lead to blurring the images of dome so that affecting image quality.

- Please use soft enough dry cloth or other alternatives to wipe internal and external surface.
- If dirt is serious, user can use a mild detergent. Any senior furniture cleaning products can be used to clean the under cover.

Appendix □ Common Knowledge on RS-485 Bus

1. Basic Feature of RS-485bus

According to industry bus standard of RS-485, RS-485 bus is half-duplex communication bus with the characteristic impedance of 120Ω , whose maximum load capacity is 32 payloads (including the master device and the controlled device).

2. Mode of Connection and Terminal Resistance

2.1 Industry standard of RS485 bus requires that connection mode in a daisy chain should be used between the devices with 120Ω terminal resistances connected at the both ends.

As shown in fig. 26 and fig. 27 is simplified connection, but the distance of part "D" shall not beyond 7 meters.

Fig 26

Fig 27

2.2 120Ω terminal resistance is connected as shown in fig 27.

120Ω terminal resistance is available in the circuit board and the connection is shown as following:

When needing to connect 120Ω resistance, toggle the 8th bit of DIP switch SW2 to "ON". This way the 120Ω resistance is connected to the circuit.

Appendix □ Address Code Mapping Table

SW1 DIP Switch sets the dome address, which using binary encoded. The 8th is the top bits, and 1st is the lowest bits.

Toggle the code bits of DIP Switch to ON, then the corresponding location is "1". Conversely, it's "0".

Following is a dome address code mapping table to set PELCO_D:

Address	Switch Settings							
	SW1-1	SW1-2	SW1-3	SW1-4	SW1-5	SW1-6	SW1-7	SW1-8
0	OFF	OFF	OFF	OFF	OFF	OFF	OFF	OFF
1	ON	OFF	OFF	OFF	OFF	OFF	OFF	OFF
2	OFF	ON	OFF	OFF	OFF	OFF	OFF	OFF
3	ON	ON	OFF	OFF	OFF	OFF	OFF	OFF
4	OFF	OFF	ON	OFF	OFF	OFF	OFF	OFF

Appendix V Exception Handling

Issue	Possible Reason	Solution
After power is applied, there is no action (self-test) and no video image.	Cable harness is improperly connected	Verify that the orientation of the connector input
	Input power voltage is too low	Verify the voltage of the input power
	Power supply does not work	Change a new power supply
Self-test is normal, but dome cannot be controlled.	Wrong communication settings	Set the correct protocol, baud rate and address of dome device
	Improper connection of control cable (polarity)	Verify the polarity of the RS485 connection as per the instruction manual
Noise after self-testing	Mechanical obstruction	Verify and correct it
	Camera module is not installed correct	Correct
	Low power	Change the correct power supply
Image is not stable	Low power	Check the power supply or make sure the power input is AC 24V
	Video cable is improperly connected.	Verify the connection of the video cable
Image is blurring	Camera is on manual focus	Change to auto focus
	The lens is dusted	Clean the lens
Controlling the dome is not smooth	Power is too low	Change the AC 24V Power supply
	Communication distance is too long	Make sure the distance is in the allowed range
	RS485 cable is not properly connected.	Make the RS485 is properly connected.
	Too many domes connected	Make sure the connected dome is in the allowed quantity
